APPLICANT: Cruts, Marc
APPLICANT: De Jonghe, Chris
APPLICANT: Singh, Samir Kumar
APPLICANT: Singh, Samir Kumar
APPLICANT: Van Broeckhoven, Christine Kumar
TITLE OF INVENTION: A NOVEL APP MUTATION ASSOCIATED WITH AN UNUSUAL ALZHEIMER'S DISEA
TITLE OF INVENTION: PATHOLOGY
FILE REFERENCE: 2183-5642US
CURRENT APPLICATION NUMBER: US/10/337,970
CURRENT FILING DATE: 2003-01-06
NUMBER OF SEG ID NOS: 8
SOFTWARE: Patentin version 3.1
SEQ ID NO 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OTHER INFORMATION: synthetic peptide corresponding to amyloid beta peptide residues OTHER INFORMATION: 1-7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ; OTHER INFORMATION: Synthetic peptide containing epitope for JRF/ABN/25 antibody.

Sequence 5, Application US/09867847

Patent No. US20020094335A1

GENERAL INFORMATION:

APPLICANT: Chalifour, Robert

APPLICANT: Mangi

APPLICANT: Gervais, Francine

TITLE OF INVENTION: VACCINE FOR THE PREVENTION AND TREATMENT OF ALZHEIMER'S

TITLE OF INVENTION: AND AMYLDID RELATED DISEASES

FILE REFERENCE: 14445-501 CIP

CURRENT PAPLICATION NUMBER: 60/168,594

PRIOR APPLICATION NUMBER: 60/168,594

PRIOR APPLICATION NUMBER: 09/724,842

PRIOR APPLICATION NUMBER: 09/724,842

PRIOR FILING DATE: 1999-11-28

NUMBER OF SEQ ID NOS: 65

SEQ ID NO 5

LENGTH: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ô

Publication No. US20040091945A1

GENERAL INFORMATION:

APPLICANT: Mindset

APPLICANT: Fitzer Attas, Cheryl

APPLICANT: Chain, Daniel

TITLE OF INVENTION: AD IN WHICH T-CELL EPITOPES ARE REDUCED

FILE REFERENCE: P-5202-US

CURRENT APPLICATION NUMBER: US/10/619,454

CURRENT FILING DATE: 2003-07-16

PRIOR FILING DATE: 2003-07-17

Sequence 103, Application US/10619454

Publication No. US20040091945A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Hitzer Attas, Cheryl
APPLICANT: Chain, Daniel
TITLE OF INVENTION: PEPTIDES AND METHODS FOR SCREENING IMMUNOGENIC PEPTIDE VACCINES /
TITLE OF INVENTION: AD IN WHICH T-CELL EPITOPES ARE REDUCED
FILE REFERENCE: P-5202-US
CURRENT APPLICATION NUMBER: US 60/396,245

PRIOR FILING DATE: 2002-07-17
NUMBER OF SEQ ID NOS: 187
SOFTWARE: Patentin Version 3.1
SEQ ID NO 103

The specification describes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition comprishing a recombinant molecule containing a gene encoding a recombinant antibody end-specific for the N-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent the accumulation of beta-amyloid peptides in the extracellular space, interstitial fluid and cerebrospinal fluid and the aggregation of such peptides into amyloid deposits in the brain. They also inhibit the progression of Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and cytokine release involved in
                                                                                                                                                                                                                                                               Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention comprises a method for treating a neurological disease or a central nervous system (CNS) disorder. The method involves displaying a therapoutic molecule capable of treating the neurological disease or CNS disorder on a viral display vehicle. The viral display vehicle is then introduced into the olfactory system of a subject to treat the disease or disorder. The method of the invention is useful for preventing, treating and diagnosing neurological diseases or CNS disorders, such as:
Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; viral infections of the brain; brain tumours; lyosomal storage diseases; Parkinson's disease; and multiple sclerosis. The present amino acid sequence represents a peptide which was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Noctropic, neuroprotective, antiinflammatory, vaccine, antigenic product, plaque-forming disease, Alzheimer's disease, SAA amyloidosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Treating or diagnosing neurological diseases of the central nervous system, e.g. Alzheimer's disease, comprises displaying a polypeptide or diagnostic agent on viral display vehicle and introducing or detecting the display vehicle.
                                                                                                                         Vaccine, gene therapy, neurological disease, CNS disorder; central nervous system disorder; olfactory system; Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; Parkinson's disease; viral infection of the brain; brain tumour; lysosomal storage disease;

The present invention describes an antibody that is targeted to amyloid beta peptide, or its fragment. Also described: (1) an antibody that is free-end specific and is targeted to: (a) the free N-terminus of amyloid beta-epetide, where the first amino acid of amyloid beta-apptide beta-peptide, where the first amino acid of amyloid beta-apptide beta-peptide fragment; (c) the free C-terminus of the amyloid beta-peptide beta-peptide fragment; (c) the free C-terminus of the amyloid beta-peptide fragment; (c) the free C-terminus of the amyloid beta-peptide beta-peptide fragment; (d) the free C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial antibody that is free-end specific and is targeted to the free C-terminus of the amyloid beta-peptide has noctropic and acarrier. The artibody targeted to amyloid beta peptide has noctropic and carrier. The antibody targeted to amyloid beta peptide has noctropic and carrier. The antibody targeted to amyloid beta peptide has noctropic and contropic antibody and acarrier for antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease, or a disease or disorder characterised by amyloid beta deposition (e.g. mild cognitive impairment, cerebral amyloid angiopathy of amyloid beta peptide are derived from beta apptide or its fragment.

Co delaying, inhibiting or suppressing accumulation of amyloid beta peptide are derived from beta amyloid beta peptide which is used in the exemplification of the present anyloid beta peptide are derived from beta amyloid beta peptide are derived from beta amyloid beta peptide are derived from beta amyloid beta peptide which is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to antigenic products (A), comprising a dendritic polymer built on a core molecule which is at least difunctional to provide branching and containing up to 16 terminal functional groups to which an antigenic peptide, that comprises an epitope of a depositoral gorming polypeptide involved in plaque-forming disease, is joined by covalent bonds. The antigenic products are useful for eliciting an immune response against a deposit-forming polypeptide involved in a plaque-forming disease or disorder, e.g. Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, Creutzfeldt-bakob disease, kuru, Gerstmann-Straussler-Scheinker disease, fatal familial insommia, scrapie or bovine spongiform encephalitis, by administering the antigenic product to a subject in need of it. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antigenic product has dendritic polymer built on core molecule having terminal functional groups to which antigenic peptide that has epitope of deposit-forming polypeptide involved in plaque-forming disease is joined.
hereditary Icelandic syndrome; senility; multiple myeloma; Creutzfeldt-Jakob disease; Kuru; Gerstmann-Straussler-Scheinker disease; fatal familial insomnia; scrapie; bovine spongiform encephalitis; antigenic; multiantigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              administering the antigenic product to a subject in need of it. The present sequence is one such antigenic peptide, which was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

The present invention describes an immunising composition (A) comprising:

(a) an antigenic product (I) which induces an immune response against the beta-secretase cleavage site of amyloid precursor protein (APP); and (b) a carrier, diluent, excipient, adjuvant or auxiliary. Also described: (1) a molecule (II) comprising the antigen-binding part of an antibody (Ab) directed against the beta-secretase cleavage site of APP; (2) a filamentous bacteriophage (FB) that displays (II), where this is a single chain Ab, on its surface; and (3) a composition containing FB. (A) has nootropic and neuroprotective activities, and can be used in vaccines or passive immunisation. (A) inhibits the cleavage of APP and so prevents the formation of beta-secretase cleavage site of APP and so prevents creponse against the beta-secretase cleavage site of APP, specifically that contains the antigen-binding part of an Ab directed against the cleavage site, or a filamentous phage that displays such an Ab (as a single-chain molecule) can be used similarly, for passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Neurological disease; central nervous system; CNS disorder; plaque-forming disease; Alzheimer's disease; SAA amyloidosis; hereditary Icelandic syndrome; senility; multiple myeloma; scrapie; bovine spongiform encephalopathy; BSE; kurn; Creutzfeldt-Jakob disease; CUD; Gerstmann-Streussler-Sheinker disease; GSS; fatal familial insomnia; FFI; non-plaque-forming disease; Huntington's chorea; viral infection; brain tumour; lysosomal storage disease; neurodegeneration; huntiple sclerosis; vaccine; beta amyloid peptide; epitope; beta AP;
                                                                                                                                                                                                                                                                                                                                                                                                      Immunizing composition, useful for treating Alzheimer's disease by inhibiting processing of amyloid precursor protein, also antibodies for passive immunization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         present sequence represents a beta-amyloid (Abera) peptide which is in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .

The invention relates to a method of treating a neurological disease or disorder of the central nervous system (CNS). The method involves displaying a therapeutic molecule capable of treating the neurological disease or disorder of the CNS on a viral display vehicle and introducing viral display vehicle into a subject by applying an effective amount of the viral display vehicle displaying the therapeutic molecule to an offectory system of the subject. The method is useful for treating a confectory system of the subject. The method is useful for treating a context of as Alzheimer's disease, late onset Alzheimer's disease, swhampoidosis, hereditary Icelandic syndrome, senility, multiple myeloma, scrapie, bovine spongiform encephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CDD), Gerstmann-crephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Treating neurological disease CNS e.g., Alzheimer's disease, by displaying therapeutic molecule capable of treating the disease on viral display vehicle which is then administered to subject through olfactory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                 The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                   New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine for a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                          New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein labelling; peptide labelling;

The invention comprises a method for providing a labelled target protein/peptide. The method involves contacting a chemical compound with affinity support, removing impurities in the reaction mixture surrounding the affinity support to which the chemical molecule is bound, and cleaving or eluting the molecule from the affinity support to obtain irreversible or reversible affinity tagging residue, labelled target protein or labelled affinity fagging residue, labelled target protein/peptide or high throughput screening assay. The method of the invention is useful for modulate the activity or characteristics of a target protein/peptide such agents that such agents are useful as pharmaceuticals. The present amino acid sequence represents an affinity tag peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque; immunisation; dementia; Alzheimer; G disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Kretzschmar T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ..

Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-Gln-Lys-Leu-Val-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a mucleic acid molecule Gly ADA89887 or its fragment. Also described: (1) a mucleic acid molecule encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of (1) and recovering (1) from the culture; (5) a composition comprising (1) correctly molecule produced by method (4); (6) a kit comprising (1) correctly comprising the culture; (3) identifying optimised clones; (10) expressing (1); (1) at testing the resulting Fab optimised clones; (10) expressing the composition, comprising optimisation of (1), and formulating the composition, comprising optimisation of (1), and formulating the composition prepared by method (8). (1) has pharmaceutical composition prepared by method (8). (1) has pharmaceutical composition prepared by method (8). (1) has continued the antibody molecule (1), nucleic acid molecule, correct or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with may also be used in preparing a disease associated with may also be used in preparing a disease associated with may also be used in preparing a disease associated with a composition of beter amyloid plaque formation. The antibody molecule of the disease mentioned above. The antibody is used for the associated with a confine disease, motor neuropathy, bown's syndrome, confine disease, motor neuropathy, bown's syndrome, administed disease, motor neuropathy, bown's syndrome, confine disease, motor neuropathy, bown's syndrome, amyloidosis Dutch type, Parkinson's disease, HIV-Tellated dementia, anyloidosis Dutch type, Parkinson's disease, HIV-Tellated dementian anyloid place anyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                        ö
                                                                                                          The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (App) soluble fragment or C-terminal fragment. The beta-amyloid or App preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or aggregation, such as Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to preparations (I) comprising a beta-amyloid peptide variant or beta-amyloid N-terminal fragment, or N-terminal amyloid precursor protein (APP) soluble fragment or C-terminal fragment. The beta-amyloid or APP preparations are useful for manufacturing a prophylactic vaccine or a therapeutic, or as a prophylactic vaccine for the prevention, or as a therapeutic for the prophylactic vaccine for the prevention, or as a therapeutic for the treatment of a disease associated with beta-amyloid formation and/or
                        New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New beta-amyloid or amyloid precursor protein preparation, useful as a prophylactic vaccine or a therapeutic for preventing or treating a disease associated with beta-amyloid formation and/or aggregation, e.g.

                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a peptide derived from beta-amyloid precursor protein (beta-APP, see AAM70863). The peptide is a beta-amyloid precursor protein (beta-APP, see AAM70863). The peptide is a beta-amyloid peptide and is used to produce a monoclonal antibody. The specification celescribes a method for prevention or inhibition of progression of Alzheimer's disease. The method comprises administering a composition Alzheimer's disease. The method comprises administering a composition comprising a recombinant antibody end-specific for the N-terminus or the C-terminus of an amyloid-beta peptide, operably linked to a promoter which is expressed in the central nervous system. The recombinant antibody molecules prevent in the acritical fluid and cerebrospinal fluid and the aggregation of such interstitial fluid and cerebrospinal fluid and the aggregation of such progression of Alzheimer's disease by inhibiting the intersaction of beta-amyloid peptides into amyloid peptides mediating Alzheimer's disease induced neurotoxicity and inhibiting the Alzheimer's disease induced complement activation and inhibiting the alzheimer's disease induced complement activation and cytokine release involved in the inflammatory process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                              Beta-amyloid precursor protein; beta-APP; beta-amyloid peptide; antibody; amyloid deposit; Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                 Preventing or inhibiting progression of Alzheimer's Disease - comprises use of recombinant DNA encoding an antibody specific for the N- or C-terminus of an amyloid-beta peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

This peptide is based on the N-terminal fragment of beta-amyloid peptide (beta-AP) and was fused to the minor coat protein of fd phage. This peptide may be used in the method of the invention. The invention provides an agent for treating a plaque forming disease. The polypeptide is displayed on a display vehicle and is capable of eliciting antibodies capable of disaggregating the aggregating protein and/or of preventing aggregating the aggregating protein. This reduces formation of amyloid plaques in the brain of victimes of plaque forming diseases, e.g. early onset Alzheimer's disease, late onset Alzheimer's disease, presymptomatic Alzheimer's disease, Az amyloidosis, hereditary Icelandic symptome, senlity, multiple myeloma, scrapie, bovine spongiform encephalopathy (BSB), kuru, Creutzfeldt-Jakob Disease (CJD), Gerstmann-Streussler-Sheinker Disease (GSS) and fatal familial insomnia (FFI)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Vaccine, gene therapy, neurological disease, CNS disorder, central nervous system disorder, Olfactory system, Alzheimer's disease, Creutzfeld-Jakob disease, Huntington's chorea, Parkinson's disease; viral infection of the brain; brain tumour; lysosomal storage disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Treating amyloidgenic disease such as Alzheimer's disease, BSE or CJD comprises presentation of plaque derived antigens or epitopes on a display vehicle, and introducing the vehicle into the recipient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                        The invention comprises a method for treating a neurological disease or a central nervous system (CMS) disorder. The method involves displaying a therapeutic molecule capable of treating the neurological disease or CMS disorder on a viral display vehicle. The viral display vehicle is then introduced into the olfactory system of a subject to treat the disease or disorder. The method of the invention is useful for preventing, treating and diagnosing neurological diseases or CMS disorders, such as:
Alzheimer's disease; Creutzfeld-Jakob disease; Huntington's chorea; viral infections of the brain; brain tumours; lyesomal storage diseases; Parkinson's disease; and multiple solerosis. The present amino acid sequence represents a peptide which was used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; creuzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Argy-His-App. Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Glu-Val-Phe-Phe-Abp-Val-Clly ADA89887 or its fragment. Also described: (I) a mucleic acid molecule call comprising (I); (2) a vector comprising the nucleic acid of (I); (3) a host call comprising the vector of (2); (4) preparing (I), comprising (I) call articles and recovering (I) from the culture; (5) a composition comprising (I) comprising the vector of (2); (4) preparing (I); (2) a vector of (2) or host cell of (3); (7) optimising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I) comprising the composition the resulting Fab optimisation library by panning against Abeta/Abeta4; (9) identifying optimised clones; (I0) expressing conformation optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition prepared by method (8). (I) has can be used in gene therapy. The antibody molecule (I), nucleic acid molecule. Covector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with a carrier, and can be used in preparing a disease associated with a described may also be used in preparing a disease associated with a described may also be used in preparing a disease associated with a described above. The antibody is used for the disease mentioned above. The antibody is used for the described above amyloid plaque formation. In particular, the disease is cannot beta-amyloid plaque formation. In particular, the disease is contained by anyloid plaque formation. In particular, the disease is contained by a particular, and experiment any
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Neurological disease, central nervous system, CNS disorder; plaque-forming disease, Alzheimer's disease; SAA amyloidosis; hereditary Icelandic syndrome; senility; multiple myeloma; scrapie; bovine spongiform encephalopathy, BSE, kuru; Creutzfeldt-Jakob disease; CJD; Gerstmann-Streussler-Sheinker disease; GSS; fatal familial insomnia; FFI; non-plaque-forming disease, Huntington's chorea; viral infection; brain tumour; lysosomal storage disease; neurodegeneration; multiple sclerosis; vaccine; beta amyloid peptide; beta AP.

phage peptide #1 used to raise non-aggregating beta AP antibody

```
tree and specific and is targeted to: (a) the free N-terminus of amyloid beta-peptide, or its fragment. Also described: (1) an antibody that is free neta-peptide; (b) the free N-terminus of amyloid beta-peptide, where the first amino acid of amyloid beta-peptide is apparate; (c) the free N-terminus of N- and/or C-terminus-truncated amyloid beta-peptide fragment; (d) the free C-terminus of N- and/or C-terminus of N- and/or C-terminus of N- and/or C-terminus of N- and/or C-terminus of the amyloid beta-peptide fragment; (2) a single chain or artificial amyloid beta-peptide fragment; (2) a single chain or carrificial amyloid beta-peptide Abetal-42; and (3) a pharmaceutical composition comprising the antibody, and a carrier. The neuroprotective activities, and can be used in antibody therapy. The antibody or its fragment is useful for manufacturing a medicament for treating a subject having Alzheimer's disease, or a disease or disorder characterised by amyloid beta deposition (eg. mild cognitive impairment, cerebral amyloid angiopathy or congiophylic anglopathy, Alzheimer's comming the inclusion body myositis), or the free or discorder companies or discorder or discorder characterised by anyloid beta deposition (eg. mild cognitive impairment) and companies or discorder characterised by anyloid beta deposition (eg. mild cognitive impairment) and companies in the free companies or minimal companies or discorder characterised by anyloid beta deposition (eg. mild cognitive impairment) and companies or discorder characterised by anyloid beta deposition (eg. mild cognitive impairment) and companies or discorder characterised by anyloid beta deposition (eg. mild cognitive impairment) and companies or discorder characterised by anyloid beta deposition (eg. mild cognitive impairment) and companies or discorder characterised by anyloid ed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody that is targeted to amyloid beta peptide, or its fragment, useful for treating a subject having Alzheimer's disease, or a disease or disorder characterized by amyloid beta deposition, e.g. cognitive
                     antibody, amyloid beta peptide; amyloid beta; nootropic; neuroprotective; antibody therapy, Alzhaimer's disease; mild cognitive impairment; cerebral amyloid angiopathy; congiopathy; bown's syndrome; inclusion body myositis; neurotoxicity; beta amyloid precursor protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (APP). The present sequence represents an amyloid beta peptide which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present invention describes an antibody that is targeted to amyloid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for delaying, inhibiting or suppressing accumulation of amyloid beta peptide, or the neurotoxicity of amyloid beta peptide or its fragment. Amyloid beta peptide are derived from beta amyloid precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

The invention relates to a method of treating a neurological disease or disorder of the central nervous system (CNS). The method involves displaying a therapeutic molecule capable of treating the neurological disease or disorder of the CNS on a viral display vehicle and introducing coviral display vehicle into a subject by applying an effective amount of the viral display vehicle displaying the therapeutic molecule to an conflactory system of the subject. The method is useful for treating a conflactory system of the subject. The method is useful for treating a neurological disease or disorder of CNS such as a plaque-forming disease. Such as Alzheimer's disease, SAA amyloidosis, hereditary Icelandic syndrome, senility, multiple myeloma, scrapie, bovine spongiform encephalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CUD), Gerstmann-creaphalopathy (BSB), kuru, Creutzfeldt-Jakob disease (CUD), Gerst
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating neurological disease CNS e.g., Alzheimer's disease, by displaying therapeutic molecule capable of treating the disease on viral display vehicle which is then administered to subject through olfactory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
